New Attachment Option for Yetter Mavericks™ Expands Versatility

Vertical Tillage Attachment coulters design a perfect fit for light spring soil work

Yetter Farm Equipment's new attachment option for the Maverick™ line of strip-till products revolutionizes the growing season for producers because of its multifunctional design.

In the fall, the versatile 2984 Maverick HR Plus makes it possible to create, fertilize, and seal strips, as well as manage residue, in one pass through the field. A new attachment option for spring use, Vertical Tillage Attachment (VTA) coulters, accelerates the creation of optimal planting conditions.

The VTA features two 18-inch, wavy-blade coulters spaced 6 inches apart. Producers can make a pass through the field with these Mavericks right before planting to gently stir the soil.

"These coulters are the same coulters Yetter uses on its popular 2982 series Vertical Tillage Attachment," said Aaron Bush, a Yetter territory manager. "They are designed to till a 6- to 8-inch area and help warm the planting zone. This is the type of tillage many producers are looking for in the spring when soil conditions are wet and cool."

"This new VTA attachment option bolts directly to the shank of the Maverick in place of the knife. Simply unbolt the knife used in the fall and bolt on the VTA for the spring," said Bush. "This versatility creates one powerful tool that can be used during two seasons."

The 2984 Maverick HR Plus is designed with parallel linkage, an adjustable front coulters, adjustable residue managers, and adjustable disc sealers. Other options include a rolling basket.

"The option to add this double-coulters setup to the Maverick HR Plus really makes it a one-size-fits-all tool and virtually guarantees a quick return-on-investment," said Bush.

Profitable Solutions for Production Agriculture

Established in 1930 and based in Colchester, Illinois, Yetter Manufacturing Company is the industry leader in planter attachments that boost productivity and profitability. Yetter makes a variety of coulters, residue managers, precision fertilizer placement products, markers, and bulk seed handling devices.
