

# STRUC MUTA

---

The small sectional mower, adapted by agriser...

## Technical specifications

---

- Double slats with equal pitch.
- Available in widths of **125, 140, 160 and 200 cm**.
- Central hydraulic drive.
- Power requirement of **12 liters per minute**.
- Requires **1** single acting and **1** free return.
- Category **1** and **2** attachment.
- Height adjustable side cutting plates.
- Central skids (only for widths **160** and **200 cm**).

## Environment

The STRUC MUTA mower has several environmental advantages. Firstly, its low weight, due to the design of the machine, allows you to limit soil compaction and avoid damaging the vegetation layer. Secondly, the minimal power required, about **5x** less than a disc mower per meter of cut, allows you to save fuel and limit your **CO2** emissions. Finally, double-bladed mowers are obviously less destructive to amphibians, insects and game than rotary mowers.

## Forage

The respect of the forage is also a strong point of the mower. The contamination of the forage is much lower because the foreign bodies potentially present are not thrown all over the forage. In addition, during the mowing process, the forage is deposited evenly and regularly on the ground, so that it dries more efficiently and more quickly. Finally, the re-growth is slightly accelerated thanks to a clean and sharp cut.

## Security

Safety is not to be neglected! The mower does not create any inertia movement, so there is no danger of foreign bodies such as stones being thrown against the machine or people being present. The front hitch allows full visibility of your work and limits the risk of hitting something or even someone... Finally, the hydraulic drive of the machine positioned in the center of it, limits the risks of damage, you preserve then your machine in good condition as long as possible.

AGRISER is an importer of agricultural equipment for France and Europe. Founded in 1957 by Willy HEGE under the name "Willy HEGE affaire", his son Walter took over in 1993 and changed the name of the company to AGRISER. Over the years, a wide range of equipment and accessories has been added to the menu, making Agriser a diversified and complete company.

In 2022, AGRISER decided to join forces with STRUC to adapt their motorized mowers to tractors in order to mow vineyards, orchards and other inaccessible plots.

— — — —

Tradition, functionality and modernity, STRUC MUTA is a small family business that has been operating in many fields since 1573. Its main activity is the production of small agricultural machines and hand tools. They are committed to quality, professionalism and quality, professionalism and precision manufacturing. Their strength lies in flexibility!
